

# Mapping Save

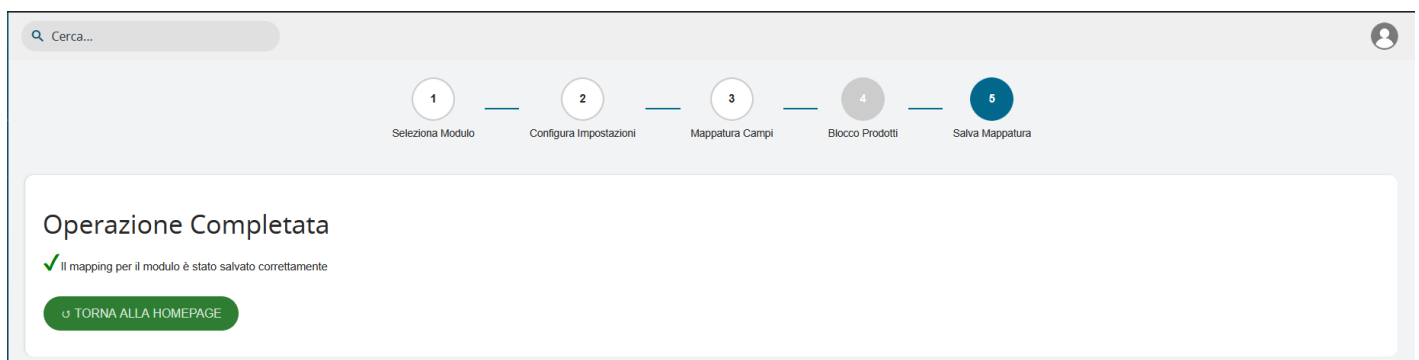

Step 5 Wizard

- Configuration Finalization

# Configuration Finalization

The fifth and final step of the wizard concludes the module configuration process. In this phase, the system confirms that all settings have been saved correctly and provides options to return to operational management.

In this phase, the system has completed three fundamental operations:

1. **Settings Validation** Verifies that the configuration is consistent and correct (e.g., valid field mapping, compatible CSV format, etc.).
2. **Permanent Save** All data is securely stored for future use. The configuration can be modified or reused at any time.
3. **Module Activation** The configured module becomes immediately available on the **plugin homepage**, ready for export.

**IMPORTANT NOTE:** The wizard completion is "not just the end of configuration," but the beginning of practical, fast, and customized use of the CSV export system within the chosen module. Once saved, each configuration becomes a ready-to-use tool, optimized to make data export simple and efficient.
