

Modifying Existing Configurations

Modifying Existing Configurations

To modify an already created configuration, the process is equally intuitive:

Modification Procedure:

1. Locate the module to be modified in the homepage list
2. Click the "EDIT" button corresponding to the desired module
3. The system will automatically load the current configuration into the wizard
4. The wizard allows you to modify all configuration aspects:
 - Add or remove fields from the export
 - Change separators, date formats, and numeric options
 - Modify file name, description, or destination folder
 - Adjust filters and selection criteria
